## Preamble

```
rm(list = ls())
options(width = 800)
options(tibble.print_max = 1000)
pklist <- c("tidyverse", "htmltab")
source("/Users/geerolf/Drive/work/code-sample/R/load-packages.R")
setwd("/Users/geerolf/Drive/work/datasets/wrds-interest-rates")
```

## Input data

This was downloaded from WRDS, as CSV file - GZ download.

```
wrds.interest.rates <- read.csv("data/674c85e4ada0f562.csv.gz") %>%
  mutate_at(vars(-date), funs(as.numeric)) %>%
  gather(series, value, -date) %>%
  filter(!is.na(value)) %>%
  left_join(htmltab(doc = "data/variablelist.html") %>%
    select(series = "Variable Name", country = "Variable Description"),
    by = "series") %>%
  arrange(series, date) %>%
  mutate_at(vars(series, country), funs(as.factor)) %>%
  select(series, country, date, value) %>%
  mutate(date = date %>% as.character %>% as.Date(format = "%Y%m%d"))
```

## Saving

```
save(wrds.interest.rates, file = "wrds.interest.rates.RData")
```
