UCLA, Econ 102 - Fall 2018

This website contains class material for the class *Econ 102* at the University of California, Los Angeles (UCLA).
The class is taught by François Geerolf. The syllabus for the class is available here:

Syllabus. pdf / html

I provide several versions of my lectures:

- one **pdf** version for printing, and one **html** version to view the lecture on your smartphone (no more excuses!).
- In addition, I also provide the source code for lectures containing some data (similarly, both a **pdf-R** version for printing and a **html-R** version for web browsers), for students who know R or are interested to learn. These include the code I use to retrieve live data from official government sources. You may find an *optional* introduction to R-statistics here: pdf / html. Everything involving R in this class is *always optional* and will *never* be tested during the midterm or the final exam, in any form.

Lectures

Lecture 1. pdf / html / pdf-R / html-R / slides
Lecture 2. pdf / html / slides
Lecture 3. pdf / html / slides
Lecture 4. pdf / html / slides

Some Exercises

Week 2. Problems
Week 3. Problems

Past Exams

Warning! The ordering, and the content of the class are different this year compared to previous years, and increasingly so as you go back in time. (in 2015 and 2016, I was using a different textbook) Anything that I do not go over this quarter is not exam material. The difference can be substantial for all the midterm-relevant material, as the lectures have been reshuffled. Thus, you might sometimes want to look at the final exam in order to review for the midterm. In order to succeed in the class, it is best to first and primarily review the material that is found in the previous section: that is where marginal returns are maximal, unless you know everything perfectly.

Spring 2018. Midterm / Solution ; Final / Solution.
Winter 2016. Midterm 1 / Solution ; Midterm 2 / Solution ; Final / Solution.
Winter 2015. Midterm 1 / Solution ; Midterm 2 / Solution ; Final / Solution.
